WHAT TO SAY

Good morning. My name is [Your Name]. Today I will present the Apex Sports Club Management System — a web-based platform that automates member registration, facility booking, league management and payments.

Introduction

WHAT TO SAY

Many clubs still rely on paper registers and manual processes. In this presentation I will show how the system automates club operations from registration to payment, and gives staff one dashboard to manage everything.

Problem Statement

WHAT TO SAY

The manual system causes lost records, double booking of facilities and slow retrieval of information. My system directly addresses each of these problems.

Objectives

WHAT TO SAY

The general objective is to design and develop a management system that improves club operations. I then break this into specific objectives: analysis, automation of registration, booking, payments and competitions.

Literature Review

WHAT TO SAY

The literature shows that manual systems in Kenya lead to double allocation and lost payments. Automated portals solve these problems, and I apply the Technology Acceptance Model to keep the design useful and easy to use.

Methodology — The Waterfall Model

WHAT TO SAY

I follow the Waterfall model because the requirements are clear. Each phase — requirements, design, implementation, testing, deployment, maintenance — completes before the next begins.

Requirement Gathering Techniques

WHAT TO SAY

I gathered requirements through observation, questionnaires, interviews with the club administrator, and analysis of existing registers and forms.

Understanding the Current System

WHAT TO SAY

Today a member registers on paper, books facilities by phone, and pays cash for a handwritten receipt. This creates no live availability and manual reports.

System Analysis

WHAT TO SAY

This is the analysis chapter. I will present three data flow diagrams: the current manual system, the proposed system at Level 0, and the proposed system broken into six sub-processes at Level 1.

Data Flow Diagram — Current System

WHAT TO SAY

This Level 0 context diagram shows the manual data flow between the member, clerk and finance office, with no automated validation at any stage.

Data Flow Diagram — Proposed System (Level 0)

WHAT TO SAY

The proposed system is a single process interacting with the member, administrator, the Paystack gateway and the Brevo email service.

Data Flow Diagram — Proposed System (Level 1)

WHAT TO SAY

Level 1 breaks the system into six sub-processes — registration, login, booking, payment, leagues and fixtures — each reading and writing its own data store.

Proposed System & Benefits

WHAT TO SAY

Members book online, availability updates in real time, double booking is removed, and admins get instant reports and automatic standings.

Hardware & Software Requirements

WHAT TO SAY

The system runs on modest hardware — Core i3 or higher, 160GB disk, 2GB RAM — with Windows, Apache, MySQL and PHP 7.4+.

System Structure & Architecture

WHAT TO SAY

The system is layered: presentation in the browser, application logic in PHP, data access via MySQLi, and MySQL at the bottom.

Database Design — ERD

WHAT TO SAY

The database implements this ERD with core tables (members, bookings, payments, sports), the league module, and competition tables for fixtures and standings.

Input & Output Design — Member Login

WHAT TO SAY

The member login at `public/login.php` validates the email and password, hashes are checked securely, and a session is created on success.

Input & Output Design — Member Registration

WHAT TO SAY

Registration collects profile details, confirms the password, rejects duplicate emails and optionally uses CAPTCHA, then sends the member to login.

Use Case Diagram — Members

WHAT TO SAY

This use case diagram shows what a member can do: register, log in, update profile, browse, book, view bookings, join teams, view fixtures and pay.

Use Case Diagram — Administrators

WHAT TO SAY

The administrator manages every entity — members, sports, coaches, facilities, equipment, bookings, payments, leagues, teams, fixtures and standings.

Security Design

WHAT TO SAY

Security includes password hashing, HTTPS, CAPTCHA, secrets stored only in .env, session checks and changing the default admin login.

A Faster, Safer Way to Manage the Club

WHAT TO SAY

In summary, the system automates registration, booking and payments, removes lost records and double bookings, and provides transparent fixtures, standings and reports.

Thank You

23

WHAT TO SAY

That concludes my presentation. Thank you for listening — I welcome your questions.
